Comments: Goats number 6 & 18 were dewormed last time based on Fecal egg counts exceeding 2000.

Those two goats were dewormed with Valbazen following a 24 hr feed/H2O withdrawl and were given a copasure bolus.

Those goats basically have been eliminated from award consideration but provide opportunity to learn how to manage parasite management.

The effectiveness of the this dewormer strategy was 81% for #6 and 99% for #18. Actual effectiveness for #6 might be higher since we extended this weigh date to 18 day instead of normal recheck of 7-10 days. It will be interesting to see if the copasure bolus provides some residual control. All in all the goats look very well and we've have plenty of forage.
