Comments (BF):

2 More Goat were above the 2000 line in the sand for Fecal egg counts. In the previous date 5 were dewormed with Valbazen and as you can see the fecal egg count reduction was quite good at 98.98%. Unfortunately as often as we check these goats test id 55 we suspect didn't handle the worm burden. This years weather pattern reminds me quite a bit like the year Hurricane Katrina hit with high temperatures and lot of moisture with humidity. We are about at the half way point. This time period goats had quite a bit of access to sericia lespedeza and it is possible some goats have gone down in egg counts based on grazing preference but we have no way to know for sure.

Overall goats look about as healthy and growing as I've seen them during the test.
