Brian Ineking

Comments:

On 9/1/2017 we had one goat that we could not visually read his ear tag. This time we had 5 head that we had to wash the tag to view the number. This has always been an indicator for me that animals are going into rut. As you can see goats are gaining weight but also picking up on the parasite counts.

On 9/14/2017 we had to deworm 5 head of goats giving us a total so far of 7 out of 53 and hopefully we won't have any more but you never know.

The goats look as good as they ever have but several do have some battle wounds.

Forage has been plentiful as they still continue to eat with their heads up but we are rotating back on to paddocks that they have grazed before.

I look forward to the final weights and the field day.
